

Job Description

Job Title: Project Manager

Location: London, England

Type: Full Time

Company Background

GAN is an award winning global supplier of industry leading casino content, fast flexible gaming systems and turnkey social gaming. The company was founded in 2002 with the aim of capturing the emerging online skill-games market. Having led the market in backgammon and regional skill games in Italy and Spain, we broadened our product portfolio to offer a full gaming software system as well as becoming a leading developer of online casino games. GAN's flagship clients are market leading casino operations and best-in-class content development houses. GAN's Simulated Gaming social casino partners include WinStar World Casino, Turning Stone Online Casino, Twin River, Maryland Live! Station Casinos, JACK Entertainment Social Gaming, The Lady Luck Interactive, The Borgata Hotel Casino & Spa, San Manuel Indian Bingo and Casino, Empire City Casino, and Parx Casino. The company has strategically positioned itself in the US as a pioneer in this emerging regulated market. In New Jersey, we have partnered with Betfair to provide a real-money online gaming site since November 2013. We've also launched an Ocean Resort Casino in July 2018.

The Role

GAN is looking for a highly motivated, self-starting, clever project manager to join GAN's growing online gaming development team. You will report directly to the London Senior Project Manager, to assist in running development for the entire company.

You will join to manage a key project for GAN working with teams across the world. GAN's Headquarters is located in London Bridge, with a large development arm in Sofia. Our marketing offices are in Las Vegas and Tel Aviv, with customer services and marketing offices in New Jersey, USA.

You will...

Deliver projects across their lifecycle, including project planning, discovery, development, testing, release and post-release, all while coordinating with the client and internal stakeholders worldwide, and finally providing weekly reports on the status of your project.

Identify risks and issues, develop contingency plans and ensure that the project documentation is completed to a high standard and kept up-to-date throughout the project lifecycle.

Collaborate with internal business units, affiliates and users, facilitating workshops and document project and communication plans.

Provide day-to-day support and troubleshooting of issues on your project and site.

Lead project meetings focused on status reporting, problem resolution, feedback, and fostering open communication within the team on project planning and execution.

This company and role truly is what you make of it. If you are ambitious, organised, and personable you will be able to help define Project Management here at GAN.

Required Skills

- Project management experience working with agile development teams in a really dynamic environment
- Certification in Project management methodologies, like Agile, Scrum master, Prince2, etc.
- High degree of competency with project management and methodology including: scoping, issue & risk identification, general management, tracking dependencies, user acceptance testing, and communication of overall project status.
- Experience of working with product management teams, including coordination of multiple internal workstreams including development teams, marketing, sales, and customer support
- Superb communication skills in English
- Excellent relationship builder with co-workers located locally and remotely
- Identify issues in process or development, and find the solutions to them
- Experience in working cross functionally to drive the high-level solutions as well as resolve lower level operational issues when needed with experience translating between business and technology
- Self-starter – you must be proactive in your role, and understand what will be required from you to complete your projects
- Expert in using Jira to manage IT development sprints

Nice to Have

Experience in

- Gaming or developing experience
- Proficient use of Microsoft Office, including using the same brand stylesheets across all documentation types
- Adobe Photoshop, Illustrator, XD, or other products for creating designs, mockups, and documentation (if you want to help mock-up your projects)
